

Redialling a recent number

loop

telecoms made simple

The last three external telephone numbers that you dialled are stored by the system. You may retrieve one to call.

When using a programmed key:

- Press the “Redial” key. The most recent number will be displayed
- Press the “Redial” key again to see the second number and again to see the third.
- When the desired number is visible, wait and within two seconds the number will be dialled.
